

Thank you for your purchase of the **GT Power Equipment Fluid Extractor.**

This unit is intended for small power equipment (lawnmowers, weed wackers, chainsaws, motorcycles, etc) or quick transfer of small amounts of gas from small engine to small engine or motorcycle/ATV. This extractor works with most liquids including gas, oil, diesel, water and anti-freeze. The hose is chemically designed to handle both gas and water based materials. The GT Power Equipment is also great for adding or removing small amounts of power steering fluid or other light oils. (Caution with brake fluid, rinse with kerosene immediately after use or rubber will degrade and fail)

Operation: For removing motor oil, it's best to get the equipment to operating temperature before siphoning. This makes the oil thin which makes it very easy to siphon out.

Insert the hose end with the semi-ridged white end into your source and insert the other end into the destination (The hose end with the spring is your output side. The spring helps the hose stay in place in many receptacles). Squeeze the bulb and let it expand. Each squeeze will lift and push the liquid through the tool. This tool will also gravity siphon but it will be slower than using the hand pump.

When done, rinse the tool with either clean water (if used for water-based materials) or with kerosene for petroleum based materials (kerosene step is not necessary but does aid in longevity).

About Our Company, How to Contact Us and Product Reviews

Gas Tapper is a small business based out of Phoenix, Arizona. Our products are assembled in Phoenix from USA and imported components. We thrive on our customers being satisfied and reviewing our product on Amazon. If you have a minute we would really appreciate you doing a product review. Simply go back to the product on Amazon and click on the reviews. It will give you an option to review the product yourself.

We hope you love our product and if for any reason you don't or need guidance in its use, would you please contact us so we can help you out? Thank you!
